

Making Green Pay

Smart Environmental Steps to Boost your Bottom Line

Wednesday, February 10, 2010

Advance Worksheet

Collecting a little information in advance will definitely enhance the value you will get from our workshop. Most of this is easy to find on your monthly bills and online. Even if you are unable to gather this information in advance – our workshop will still provide you plenty of value.

Business Costs:

Electricity	\$ _____
Natural Gas	\$ _____
Vehicle Fuel	\$ _____
Water	\$ _____
Solid Waste	\$ _____
Annual Total	\$ _____

Including your costs for a full year is most accurate. If this is not practical, multiplying your monthly charges by 12 still provides a rough estimate of your annual costs.

While our workshop will focus specifically on your business -- your energy, water and solid waste costs at home have a direct parallel. Once you learn how to make green pay at work, it's fairly easy to find similar savings at home. If you are interested in pursuing this angle, consider tabulating your home costs too.

Home Costs:

Electricity	\$ _____
Natural Gas	\$ _____
Vehicle Fuel	\$ _____
Water	\$ _____
Solid Waste	\$ _____
Annual Total	\$ _____

Please bring this information with you to the workshop on February 10, and you'll be ready to identify some important savings opportunities.
